

Hot Forging Lines

Our 150 and 200-ton hot forging lines manufacture carbon and alloy steel components in various sizes and geometries

Thread Rolling Unit

In our rolling unit, various operations are carried out, including thread rolling, ball rolling, profile and spline rolling, as well as hex socket forming, cotter pin drilling, and wrench flat machining.

Packaging and Dispatch

Our packaging and assembly unit operates with a commitment to fully meeting customer requirements. Pallets prepared using computer-assisted packing list software are handled through dedicated loading and unloading rack systems and dispatched to customers in accordance with their orders

Logistics and Storage Facility

We have a strong logistics infrastructure designed to meet the on-time delivery expectations of OEM and automotive aftermarket customers. Our products are shipped in line with customer requirements via road, sea, and air transportation methods.
